SUMMARY

Software developer with practical experience in building applications and integrating backend services using Java, Flutter, and Spring Boot. Strong understanding of data structures, algorithms (400 problems), REST APIs, and database-driven systems. Experienced in working on real-time and offline-first applications, focusing on performance and scalability. Interested in building efficient, maintainable systems and continuously improving problem-solving and debugging skills for System Engineer roles.

TECHNICAL SKILLS

- **Languages:** Java, Python, SQL, Dart, C, HTML/CSS
- **Frameworks & Development:** Flutter, Spring Boot, REST APIs, Object-Oriented Programming (OOP)
- **Core Concepts:** Data Structures & Algorithms (400 problems), DBMS, Operating Systems (Basics), System Design Fundamentals, Debugging
- **Tools & Platforms:** Git, GitHub, Postman, VS Code, IntelliJ IDEA, Android Studio
- **Application Development:** Real-time Applications, API Integration, Event-driven Programming, Offline-first Systems, Modular Architecture
- **Databases:** Database Design, Data Modeling, Normalization

EXPERIENCE

App Development Intern | Bright Infonet | India | Oct 2025 – Dec 2025

- Worked on a production-level social networking application using Flutter with REST API integration.
- Improved UI responsiveness and made navigation smoother by optimizing widget rendering and state handling.
- Identified and fixed performance issues that were affecting user experience.
- Built reusable components to make the codebase easier to maintain and extend.
- Collaborated with the team using Git, following proper version control practices.

PROJECTS

RouteSync – Real-Time Bus Tracking System | [\[GitHub Link\]](#)

- Built a real-time bus tracking application using Flutter with continuous GPS-based location updates.
- Implemented data synchronization so multiple users could see consistent live tracking.
- Handled frequent data updates efficiently to maintain smooth performance.
- Designed API-based communication for structured and scalable data flow.

Vari – Geo-Spatial Health Surveillance System | [\[GitHub Link\]](#)

- Developed a geo-spatial system to analyze environmental data and identify potential health risks.
- Designed backend-ready workflows using Spring Boot and REST APIs.
- Implemented logic to detect unusual patterns in data for early risk identification.
- Structured the system to support scalable data processing and future enhancements.

Flappy Bird Clone (2D Game Development) | [\[GitHub Link\]](#)

- Created a 2D game using Java Swing with collision detection and scoring features.
- Built a continuous game loop to handle rendering and user interactions smoothly.
- Used object-oriented design to keep the code modular and easy to manage.

Task Manager – Offline-First Productivity App | [\[GitHub Link\]](#)

- Developed a task management app using Flutter with offline-first functionality.
- Implemented local database storage for fast and reliable data access.
- Added features like task prioritization, filtering, and dependency management.
- Ensured the app works smoothly even without an internet connection.

EDUCATION

Bachelor of Technology, Computer Science & Engineering | Dr. A.P.J. Abdul Kalam Technical University (AKTU) | Kanpur, India | CGPA: 7.9

Sept 2022 – Jun 2026
